Mobility Module

Automated cold chain control for your shipments

Measure and monitor the cold chain on the move

Geolocate and optimize your fleet

Automate activity reports for your rounds/delivery routes

An optional module to simplify monitoring and manage the cold chain of your mobile measuring equipment.

The Mobility module of the JRI-MySirius solution enables you to autonomously edit and transmit activity reports on mobile data loggers: Nova SPY, Nano SPY, LoRa SPY, SPY Mobility 2 and JRI digital probes.

Increase efficiency with features tailored to your needs

Year	Features	Level 1	Level 2

Mobility Module benefits

Supervision of a fleet
in real time

Convergence of information
on a single application

Complete control of the
hardware and software
development chain

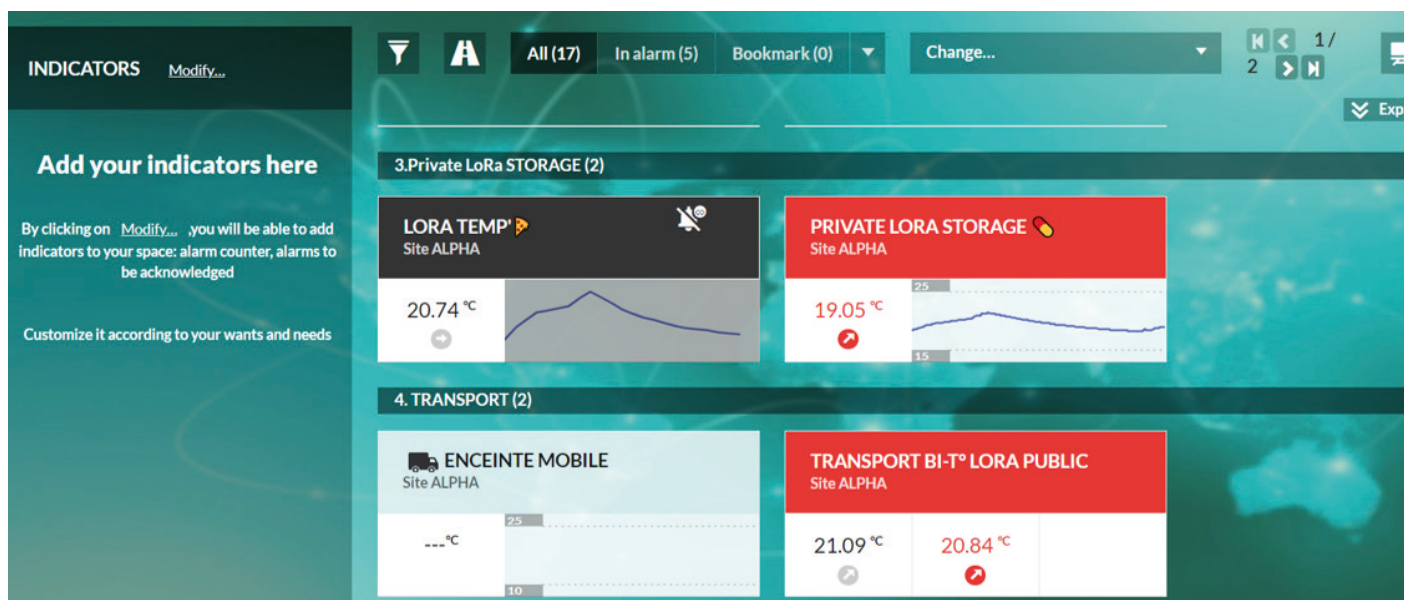

A single module with an intuitive interface to help you manage the traceability of mobile refrigerated/isothermal units.

With the Mobility Module, you have a solution to:

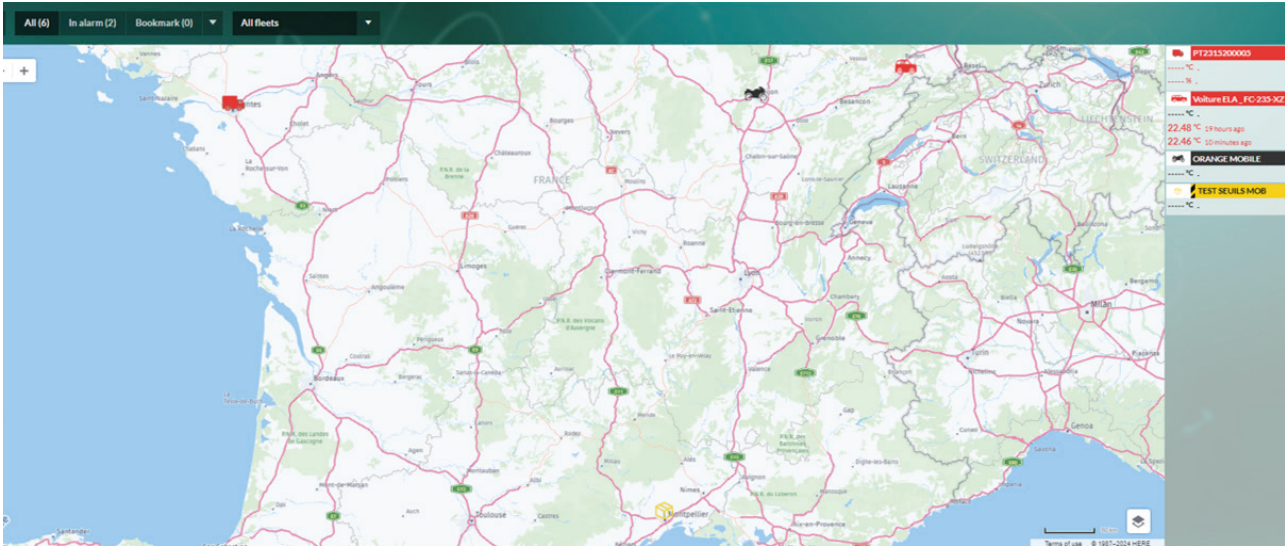

- Consult, analyze and share the results of mobile units activities during tours, trips and shipments
- Locate mobile loudspeakers on a map in real time, and receive Geofencing notifications
- Administer the solution with configuration of desired functionalities
- Customize the module to suit your profile

Operating Screen

Highlighting the visualization of static and mobile units.

Last Position Screen

Display of mobile cabinets on a map with alert indicator.

Use cases

Regular round

Automate route detection and activity reporting to save time in operations

Journey

Visualize your mobile cabinets' journeys in real time, improve responsiveness and increase customer satisfaction.

Parcel tracking with Link modem

Automatically identify and time-stamp the arrival and/or departure of recorders via a Link modem installed on your premises

Parcel tracking with NaoScan

Easily control the flow of parcels handled by your couriers, and increase your level of traceability for better management of your business

Shipping

Locate your shipments, monitor their condition and react in real time
